

EXHIBIT B

Preliminary Report on the Newly Enacted Georgia State House and Senate Plans
Dr. Lisa Handley

I. Introduction

Summary Conclusion Voting in the six areas of Georgia that I studied for this project is racially polarized. This polarization impedes the ability of Black voters to elect candidates of their choice unless districts are drawn that provide Black voters with an opportunity to elect their preferred candidates to the state legislature. As demonstrated by illustrative state house and state senate plans, the newly enacted state legislative plans (Enacted State House Plan and Enacted State Senate Plan) fail to offer Black voters an opportunity to elect their preferred candidates in areas of the state where voting is racially polarized and where majority Black opportunity districts could have been created. The failure of the Enacted Plans to provide more Black opportunity districts dilutes the opportunity of Black voters to participate in the electoral process and to elect candidates of their choice to the Georgia state legislature.

Scope of Project I was retained by plaintiffs in this case as an expert to conduct an analysis of voting patterns by race in several areas in the State of Georgia to determine whether voting in these areas is racially polarized. In addition, I was asked to assess the ability of Black voters to elect their candidates of choice in these areas of the Enacted Plans compared to the illustrative plans (Illustrative State House and Illustrative State Senate Plan) drawn by plaintiffs' expert demographer, Bill Cooper, in this litigation.¹

II. Professional Background and Experience

I have over thirty-five years of experience as a voting rights and redistricting expert. I have advised scores of jurisdictions and other clients on minority voting rights and redistricting-related issues. I have served as an expert in dozens of voting rights cases. My clients have included state and local jurisdictions, independent redistricting commissions (Arizona, Colorado, Michigan), the U.S. Department of Justice, national civil rights organizations, and such international organizations as the United Nations.

I have been actively involved in researching, writing, and teaching on subjects relating to voting rights, including minority representation, electoral system design, and redistricting. I co-

¹ I am being compensated at a rate of \$300 an hour for work on this project.

authored a book, *Minority Representation and the Quest for Voting Equality* (Cambridge University Press, 1992), and co-edited a volume, *Redistricting in Comparative Perspective* (Oxford University Press, 2008), on these subjects. In addition, my research on these topics has appeared in peer-reviewed journals such as *Journal of Politics*, *Legislative Studies Quarterly*, *American Politics Quarterly*, *Journal of Law and Politics*, and *Law and Policy*, as well as law reviews (e.g., *North Carolina Law Review*) and a number of edited books. I hold a Ph.D. in political science from The George Washington University.

I have been a principal of Frontier International Electoral Consulting since co-founding the company in 1998. Frontier IEC specializes in providing electoral assistance in transitional democracies and post-conflict countries. In addition, I am a Visiting Research Academic at Oxford Brookes University in Oxford, United Kingdom. Attached to the end of this report as *Appendix D* is a copy of my curriculum vitae.

III. Analysis of Voting Patterns by Race

An analysis of voting patterns by race serves as the foundation of two of the three elements of the “results test” as outlined in *Thornburg v. Gingles*: a racial bloc voting analysis is needed to determine whether the minority group is politically cohesive; and the analysis is required to determine if whites are voting sufficiently as a bloc to usually defeat the candidates preferred by minority voters. The voting patterns of white and minority voters must be estimated using statistical techniques because direct information about the race of the voters is not, of course, available on the ballots cast.

To carry out an analysis of voting patterns by race, an aggregate level database must be constructed, usually employing election precincts as the units of observation. Information relating to the demographic composition and election results in these precincts is collected, combined, and statistically analyzed to determine if there is a relationship between the racial composition of the precincts and support for specific candidates across the precincts.

Standard Statistical Techniques Three standard statistical techniques have been developed over time to estimate vote choices by race: homogeneous precinct analysis, ecological

regression, and ecological inference.² Two of these analytic procedures – homogeneous precinct analysis and ecological regression – were employed by the plaintiffs’ expert in *Thornburg v. Gingles*, have the benefit of the Supreme Court’s approval in that case, and have been used in most subsequent voting rights cases. The third technique, ecological inference, was developed after the *Gingles* decision and was designed, in part, to address some of the disadvantages associated with ecological regression analysis. Ecological inference analysis has been introduced and accepted in numerous district court proceedings.

Homogeneous precinct (HP) analysis is the simplest technique. It involves comparing the percentage of votes received by each of the candidates in precincts that are racially or ethnically homogeneous. The general practice is to label a precinct as homogeneous if at least 90 percent of the voters or voting age population is composed of a single race. In fact, the homogeneous results reported are not estimates – they are the actual precinct results. However, most voters in Georgia do not reside in homogeneous precincts and voters who reside in homogeneous precincts may not be representative of voters who live in more racially diverse precincts. For this reason, I refer to these percentages as estimates.

The second statistical technique employed, *ecological regression* (ER), uses information from all precincts, not simply the homogeneous ones, to derive estimates of the voting behavior of minorities and whites. If there is a strong linear relationship across precincts between the percentage of minorities and the percentage of votes cast for a given candidate, this relationship can be used to estimate the percentage of minority voters supporting the candidate.

The third technique, *ecological inference* (EI), was developed by Professor Gary King. This approach also uses information from all precincts but, unlike ecological regression, it does not rely on an assumption of linearity. Instead, it incorporates maximum likelihood statistics to produce estimates of voting patterns by race. In addition, it utilizes the method of bounds, which uses more of the available information from the precinct returns as well as providing more

² For a detailed explanation of homogeneous precinct analysis and ecological regression see Bernard Grofman, Lisa Handley and Richard Niemi, *Minority Representation and the Quest for Voting Equality* (Cambridge University Press, 1992). See Gary King, *A Solution to the Ecological Inference Problem* (Princeton University Press, 1997) for a more detailed explanation of ecological inference.

information about the voting behavior being estimated.³ Unlike ecological regression, which can produce percentage estimates of less than 0 or more than 100 percent, ecological inference was designed to produce only estimates that fall within the possible limits. However, EI does not guarantee that the estimates for all of the candidates add to 100 percent for each of the racial groups examined.

Database To analyze voting patterns by race using aggregate level information, a database that combines election results with demographic information is required. This database is almost always constructed using election precincts as the unit of analysis. The demographic composition of the precincts is based on voter registration or turnout by race if this information is available; if it is not, then voting age population or citizen voting age population is used. Georgia collects voter registration data by race, and the 2016, 2018, and 2020 reports of turnout counts by race and ethnicity were obtained from the Georgia Secretary of State's office for inclusion in the database.

To build the Georgia dataset used for this racial bloc voting analysis, 2016, 2018, and 2020 precinct-level shapefiles were acquired from the Voting and Election Science Team. These shapefiles were joined to precinct-level election returns from the Georgia Secretary of State's office, which were processed and cleaned by OpenElections. The 2020 Census Block shapefiles, and total and voting age populations by race and ethnicity, were obtained from the Census FTP portal.

The election returns for the 2016, 2018, and 2020 election cycles were disaggregated down to the level of the 2020 Census block. This block-level dataset was then reaggregated up to the level of the 2020 voting districting, taking into account splits of the voting districts by the implemented and proposed plans.

Plan comparisons were made using the Georgia newly enacted state senate and house plans, which were acquired as census block equivalency files. The Illustrative state house and senate files were obtained from plaintiffs' expert demographer, Bill Cooper, also as census block equivalency files.

³ The following is an example of how the method of bounds works: if a given precinct has 100 voters, of whom 75 are Black and 25 are white, and the Black candidate received 80 votes, then at least 55 of the Black voters voted for the Black candidate and at most all 75 did. (The method of bounds is less useful for calculating estimates for white voters, as anywhere between none of the whites and all of the whites could have voted for the candidate.)

Statewide elections analyzed All recent statewide election contests that included Black candidates were analyzed.⁴ The general elections included the 2021 Special U.S. Senate runoff, the 2020 U.S. Senate Special general election, and the 2018 general election contests for Governor, Commissioner of Insurance, and School Superintendent. I also analyzed recent statewide Democratic primaries that included Black candidates, including the 2018 Democratic primaries for Governor, Lieutenant Governor, Commissioner of Insurance, School Superintendent, and Commissioner of Labor. Republican primaries were not examined because the overwhelming majority of Black voters who participate in primaries cast their ballots in Democratic rather than Republican primaries. As a consequence, Democratic primaries are far more probative than Republican primaries in ascertaining the candidates preferred by Black voters.⁵

Geographic areas analyzed I examined voting patterns in six areas of Georgia where the Illustrative Plans offer districts with majority Black voting age populations (BVAP),⁶ that the Enacted Plans fail to provide. Although the Illustrative Plans offers more majority Black state senate and state house districts than the seven found in the six regions discussed below,⁷ my analysis focuses on these six areas because the majority Black districts in these areas are readily identifiable as “additional” when portions of the Enacted and Illustrative districts are compared. The six areas of interest, the set of Illustrative and Enacted districts being compared in each of

⁴ In addition to the five recent general election contests that included Black candidates, I analyzed the two contests in which Jon Ossoff ran – the 2021 runoff for U.S. Senate and the November 2020 general election for U.S. Senate.

⁵ In addition, producing reliable estimates for Black voters in Republican primaries would not have been possible.

⁶ Black voting age population has been calculated by counting all persons who are 18 or older who checked “Black or African American” on their census form. This includes persons who are single-race Black or any part Black (i.e., persons of two or more races who indicate “Black” as one of the races), including Hispanic Black.

⁷ The Enacted Plans create 14 majority Black VAP state senate districts and 49 majority Black VAP state house districts. The Illustrative Plans create 19 majority Black VAP state senate districts and 54 majority Black VAP state house districts.

these areas, and the counties encompassed by these areas,⁸ are listed in Table 1. The additional majority Black districts offered in each area by the Illustrative Plans are bolded.

Table 1: Georgia Areas of Interest Analyzed

Area of Interest	Illustrative Districts	Enacted Districts	Counties
State Senate Districts			
Eastern Atlanta Metro Region (Map 1)	10 17 43	10 17 43	Dekalb, Henry, Morgan, Newton, Rockdale, Walton

IV. Findings

Voting is racially polarized in the six areas of Georgia I examined Voting is racially polarized in the six areas of Georgia that I examined. In all seven recent general elections I analyzed, Black voters were cohesive in supporting their preferred candidates and the white voters' bloc voted against these candidates. The average percentage of the white vote for Black-preferred Black candidates is no higher than 13.8% in these six areas (13.8% is the average white vote for Raphael Warnock in 2021 across the six areas).

Recent Democratic primaries that included Black candidates were also consistently racially polarized in all six areas. The only regular exceptions to this were the two recent Democratic primaries in which Black voters supported white candidates (Jon Ossoff in the 2020 primary for U.S. Senate and Jim Barksdale in his bid for the Democratic nomination for U.S. Senate in 2016). The estimates of Black and white voting patterns for these statewide general and Democratic primaries can be found in *Appendix A*.

My examination of voting patterns in these areas also included state legislative elections. A state legislative contest was analyzed if the previously existing state house or state senate district was wholly contained within one of the areas or overlapped with the additional majority Black Illustrative district(s) in an area. In addition, I looked only at biracial contests (that is, contests that included both Black and white candidates). There were eight recent state senate contests and 16 state house contests that met these criteria. All 24 of these state legislative elections were racially polarized. None of the Black candidates competing in the state senate contest analyzed garnered as much as 8% of the white vote – the average over the eight contests was only 4.6%. Black candidates fared slightly better in the state house contests, averaging 9.4% of the white vote. The

only Black candidates to win were the candidates who ran in majority Black state legislative districts.

The estimates of Black and white voting patterns for the state legislative election contests analyzed can be found in *Appendix B*.

The Previous Plans failed to provide Black voters with opportunities to elect their preferred candidates that the Illustrative Plans would provide Legislative districts in the previous plans located in the same areas as the additional Illustrative majority Black districts failed to provide Black voters with an opportunity to elect their candidates of choice in past state legislative elections. Table 2 lists the previous state senate and house districts that overlap with the additional majority Black districts offered by the Illustrative Plans. A previous district must incorporate at least 5% of the Illustrative district to be included in the table, and the percentage of the Illustrative district included is specified. The shaded districts are the previous districts I have used as comparison districts – they are almost always the previous districts with the largest overlap with the additional majority Black Illustrative districts.

**Table 2: Overlap of Additional Illustrative State Legislative Districts with
Previous State Legislative Districts**

Illustrative State Senate Plan	Previous State Senate Plan	% of Illustrative District in Previous District	BVAP %		Illustrative State House Plan	Previous State House Plan	% of Illustrative District in Previous District	BVAP %
017	010	17.6%	74.98%		073	063	13.6%	71.31%
017	017	53.7%	41.72%		073	073	38.0%	35.12%
017	043	28.5%	68.74%		073	075	6.4%	74.27%
					073	078	41.8%	68.59%
023	022	13.4%	58.76%					
023	023	30.3%	35.62%		110	073	19.4%	35.12%
023	025	22.7%	28.50%		110	111	23.1%	51.56%
023	026	29.5%	60.14%		110	130	57.5%	36.30%
028	016	40.7%	22.00%		144	120	12.6%	26.62%
028	034	27.7%	68.34%		144	128	23.6%	54.62%
028	044	31.6%	72.43%		144	144	15.0%	27.24%
					144	145	48.8%	38.94%
					153	153	33.4%	65.15%
					153	171	36.1%	38.61%
					153	172	8.1%	27.69%
					153	173	21.4%	35.38%

According to Table 2, Illustrative senate district 17 overlaps the most with Previous state senate district 17. Previous state senate district 17, with a BVAP of 41.72%, did not elect state senators that were the candidates of choice of Black voters. In 2016, Richard Jeffares won the seat with overwhelming support from white voters and virtually no support from Black voters. Brian Strickland's election in 2018 followed the same pattern: nearly all of the white voters cast their vote for him and virtually none of the Black voters did so. The estimates for these two contests can be found in Appendix B.⁹

⁹ The 2020 election is not included in Appendix B because only white candidates competed. However, my analysis of the election indicates that white voters again provided overwhelming support to Strickland, while Black voters overwhelmingly supported his opponent, who was defeated.

Previous state senate district 23, with the highest overlap percentage with Illustrative state senate district 23, has had only one recent contested election. The estimates for this election can be found in Appendix B. Over 90% of white voters supported the White candidate, Max Burns, while Black voters overwhelmingly supported his Black opponent, Ceretta Smith, who lost the contest.

Illustrative state senate district 28 overlaps the most with Previous state senate district 16, which had a 22.0% BVAP. The 2020 election contest for this seat was racially polarized, with over 90% of white voters supporting the winning white candidate and well over 90% of the Black voters supporting his Black opponent. (See Appendix B.) Only white candidates competed for the seat in 2018;¹⁰ there was no contested election in this district in 2016.

Although Table 2 indicates that Illustrative state house district 73 overlaps the most with Previous state house district 78, which did provide Black voters with an opportunity to elect their candidates of choice, Illustrative District 73 is an additional majority Black district because Previous state house district 73 was not an effective Black district. Previous state house district 73, with a 35.12% BVAP, had one recent election that included a Black candidate. In this 2016 election, the Black candidate garnered nearly all of the Black vote but none of the white vote and lost to the candidate supported by white voters.¹¹ (See Appendix B.)

Illustrative house district 110 overlaps the most with Previous district 130, which had a BVAP of 36.30%. The only recent contested election for this seat was in 2020. White voters overwhelmingly supported the winner, while Black voters overwhelmingly supported his Black opponent. (See Appendix B.)

Recent elections in Previous state house district 145, which has the highest overlap with Illustrative state house district 144, also failed to provide Black voters with an opportunity to elect their candidates of choice. The district elections in 2016 and 2020 (there was no contested

¹⁰ Because the 2018 election for this district included only white candidates, it is not included in Appendix B. However, my analysis of this election contest indicates that it was also starkly polarized and the candidate supported by Black voters lost to the candidate supported by white voters.

¹¹ The 2020 election included only white candidates and therefore is not in Appendix B. However, my analysis of the election contest indicates that it was racially polarized and the candidate overwhelmingly preferred by Black voters was defeated by the candidate of choice of white voters. There was no contested election in 2018.

election in 2018) were starkly polarized and the Black candidate, despite overwhelming support from Black voters, lost to the white voters' candidate of choice. (See Appendix B.)

There have been no recent contested elections in Previous state house district 171 – the district that Illustrative state house district 153 overlaps with the most. The district had a BVAP of 36.1% and consistently elected a white Republican to the Georgia state house.

The Enacted Plans continue to fail to provide Black voters with opportunities to elect their preferred candidates that the Illustrative Plans would provide In order to determine if a proposed district is likely to provide minority voters with an opportunity to elect their candidates of choice, a district-specific, functional analysis is necessary. This assessment depends not only upon the demographic composition of the district but the voting patterns in that district and whether the candidates preferred by minority voters can actually win in the district – this is what is meant by “functional.” In the case of the Enacted and Illustrative districts, election results recompiled to conform to the boundaries of the newly enacted and illustrative districts must be used to make this determination.

The best election contests to use for a functional analysis are recent elections that included a viable major party minority candidate supported by minority voters but not by white voters. Five recent statewide general election contests in Georgia satisfy these conditions: the 2021 and 2020 special general and special runoff elections for U.S. Senate, with Raphael Warnock; the 2018 race for Governor, in which Stacey Abrams ran; and the 2018 contests for Commissioner of Insurance and School Superintendent, in which Black candidates Janice Laws and Otha Thornton competed, respectively. After recompiling the election results for these five contests to conform to the boundaries of the districts, an average of the five vote proportions for the Black-preferred candidates was calculated. I refer to this average as the general election effectiveness score (GE score).

To provide an indication of how Black-preferred candidates would fare in Democratic primaries (Black voters are far more likely to choose to vote in Democratic primaries than Republican primaries in Georgia), six recent statewide Democratic primaries were used to construct a Democratic primary “effectiveness” score (DPr score). The primaries chosen, and the name of the Black candidate supported by Black voters in each of these primary contests, are as follows:

- 2018 Governor with Stacey Abrams

- 2018 Lieutenant Governor with Tirana Arnold James
- 2018 Commissioner of Insurance with Janice Laws
- 2018 School Superintendent with Otha Thornton
- 2018 Commissioner of Labor with Fred Quinn
- 2018 Secretary of State with Dee Dawkins-Haigler

If a district is majority BVAP or has a significant BVAP and recompiled election results for that district produced a score of at least 0.5 on both the GE and the DPr indices, I deemed the district likely to provide Black voters with an opportunity to elect their candidates of choice. If not, I deemed the district not likely to provide Black voters with an opportunity to elect their candidates of choice (i.e., the candidates preferred by Black voters would typically lose to candidates preferred by white voters). As the plan comparison tables (Plan Comparison Tables 1-6), below, will show, Black voters would have a greater opportunity to elect their candidates of choice in the Illustrative legislative districts highlighted than in the Enacted districts in the same area.

In all six areas of Georgia that I examined, voting is racially polarized, and the Enacted Plans fail to provide seven majority Black districts that would provide Black voters with the opportunity to elect their candidates of choice that the Illustrative Plans demonstrate can be drawn. The following provides a brief description of the six areas, along with maps and district comparison tables.

Eastern Atlanta Metro Region Voting is racially polarized in this area – in all seven of the general elections and in five of the eight Democratic primaries, Black and white voters supported different candidates. The Enacted Senate Plan fails to provide a majority Black opportunity district that the Illustrative Plan offers in this area (labeled District 17), as shown in Map and Comparison Table 1.

Southern Atlanta Metro Region Voting in the seven general elections and six of the eight Democratic primaries analyzed was racially polarized. The Enacted Senate Plan fails to provide a majority Black opportunity district that the Illustrative Plan offers in this area (District 28), as shown in Map and Comparison Table 2.

East Central Georgia Voting in the seven general elections and six of the eight Democratic primaries was racially polarized in this area of the State. The Enacted Senate Plan fails to provide a

majority Black opportunity district that the Illustrative Plan offers in this area (District 23), as shown in Map and Comparison Table 3.

Southeastern Atlanta Metro Region Voting is racially polarized in this area – in all seven of the general elections and six of the eight Democratic primaries, Black and white voters supported different candidates. The Enacted House Plan fails to draw two Black majority opportunity districts that the Illustrative Plan offers in this area (Districts 73 and 110), as shown in Map and Comparison Table 4.

Central Georgia Voting in the seven of the general elections analyzed and in at least four of the eight Democratic primaries was racially polarized in this area of the State. The Enacted House Plan fails to provide a majority Black opportunity district that the Illustrative Plan offers in this area (District 144), as shown in Map and Comparison Table 5.

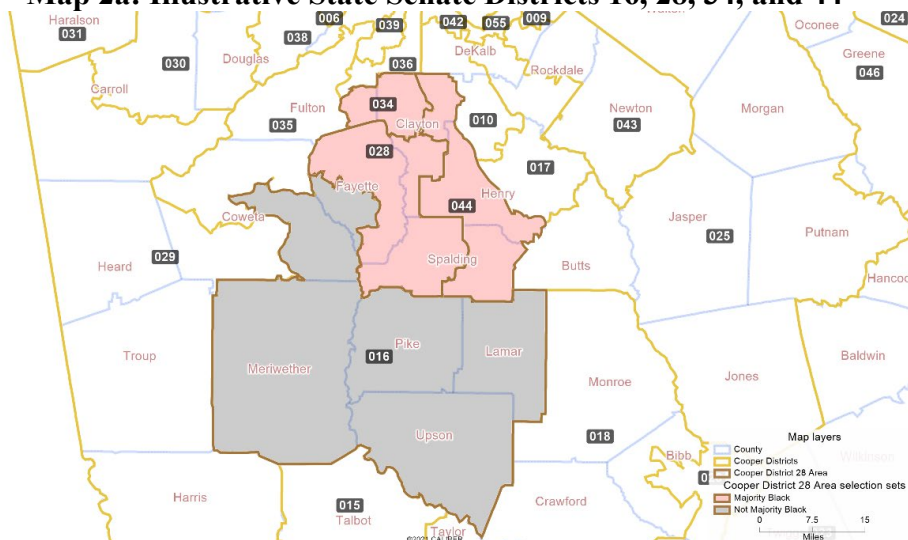

Southwest Georgia Voting is racially polarized in this area of the State. In all seven of the general elections and at least four of the eight Democratic primaries, Black and white voters supported different candidates. The Enacted State House Plan fails to provide a majority Black opportunity district that the Illustrative plan offers in this area (District 153), as shown in Map and Comparison Table 6.

Comparison Table 6

Illustrative District	BVAP %	GE Score	DPr Score		Proposed District	BVAP %	GE Score	DPr Score
151	56.6%	0.528	0.633		151	42.4%	0.443	0.603
153	58.0%	0.538	0.638		152	26.1%	0.273	0.615
171	35.6%	0.322	0.590		153	67.9%	0.636	0.651
173	27.6%	0.288	0.582		171	39.6%	0.352	0.588

Additional majority BVAP districts in the Illustrative Plans draw population from Enacted districts that would fail to provide an opportunity to elect As the previous discussion demonstrates, the Enacted State Senate and House Plans fail to provide Black voters with an opportunity to elect their candidates of choice in areas of the State where voting is racially polarized and where the Illustrative Plans show majority BVAP districts can be drawn. The seven additional majority Black Illustrative districts I focus on in this report were all drawn by pulling in population from at least one district in an Enacted Plan that fails to provide Black voters with an opportunity to elect their preferred candidates. The two tables below, Table 3 and Table 4, identify the Enacted districts that overlap with each Illustrative district analyzed by at least 5%, the percent of the Enacted district that overlaps with the Illustrative district, and indicate which of the Enacted districts are Black opportunity districts and which are not by reporting the percentage BVAP, and the GE and DPr scores. (*Appendix C* contains the same comparative information for the Illustrative and Previous State House and State Senate Plans.)

Table 3: Illustrative and Enacted State Senate District Overlaps

VII. Conclusion

My analysis of voting patterns by race found that the Black community in the six areas of Georgia that I examined is cohesive in supporting their preferred candidates and that white voters consistently bloc vote to defeat these candidates in areas where Black majority opportunity districts could have been created but were not. Racially polarized voting substantially impedes the ability of Black voters to elect candidates of their choice to the Georgia state legislature in these areas unless districts are drawn to provide Black voters with this opportunity. The Enacted State Senate and House Plans dilute the voting strength of Black voters in Georgia by failing to create additional districts in these areas that offer Black voters an opportunity to elect their candidates of choice to the state legislature.

I reserve the right to modify and/or supplement my opinions, as well as to offer new opinions.

Pursuant to 28 U.S.C. § 1746, I declare under penalty of perjury that the foregoing is true and correct.

Respectfully submitted and executed on January 7, 2022.

A handwritten signature in blue ink, reading "Lisa Handley", is positioned above a horizontal line.

Dr. Lisa Handley

Appendix D

Lisa R. Handley
CURRICULUM VITAE

Professional Experience

Dr. Handley has over thirty years of experience in the areas of redistricting and voting rights, both as a practitioner and an academician, and is recognized nationally and internationally as an expert on these subjects. She has advised numerous clients on redistricting and has served as an expert in dozens of redistricting and voting rights court cases. Her clients have included the U.S. Department of Justice, civil rights organizations, independent redistricting commissions and scores of state and local jurisdictions. Internationally, Dr. Handley has provided electoral assistance in more than a dozen countries, serving as a consultant on electoral system design and redistricting for the United Nations, UNDP, IFES, and International IDEA. In addition, Dr. Handley served as Chairman of the Electoral Boundaries Commission in the Cayman Islands.

Dr. Handley has been actively involved in research, writing and teaching on the subjects of redistricting and voting rights. She has co-written a book, Minority Representation and the Quest for Voting Equality (Cambridge University Press, 1992) and co-edited a volume (Redistricting in Comparative Perspective, Oxford University Press, 2008) on these subjects. Her research has also appeared in peer-reviewed journals such as *Journal of Politics*, *Legislative Studies Quarterly*, *American Politics Quarterly*, *Journal of Law and Politics*, and *Law and Policy*, as well as law reviews and edited books. She has taught political science undergraduate and graduate courses related to these subjects at several universities including the University of Virginia and George Washington University. Dr. Handley is a Visiting Research Academic at Oxford Brookes University in the United Kingdom.

Dr. Handley is the President of Frontier International Consulting, a consulting firm that specializes in providing electoral assistance in transitional and post-conflict democracies. She also works as an independent election consultant both in the United States and internationally.

Education

Ph.D. The George Washington University, Political Science, 1991

Present Employment

President, Frontier International Electoral Consulting LLC (since co-founding company in 1998).

Senior International Electoral Consultant Technical assistance for clients such as the UN, UNDP and IFES on electoral system design and boundary delimitation

Visiting Research Academic, Centre for Development and Emergency Practice (CENDEP), Oxford Brookes University

U.S. Clients since 2000

American Civil Liberties Union – redistricting consultant, expert testimony in Ohio partisan gerrymander challenge and challenge to Commerce Department inclusion of citizenship question on 2020 census form

Lawyers Committee for Civil Rights Under Law – expert testimony in challenges to statewide judicial elections in Texas and Alabama

US Department of Justice – expert witness testimony in several Section 2 and Section 5 cases)

Alaska: Redistricting Board (2000 and 2010) – redistricting consultation, expert witness testimony

Arizona: Independent Redistricting Board (2000 and 2010) – redistricting consultation

Colorado: Redistricting Commission (2020), Redistricting Board (2000 and 2010) – redistricting consultation

Connecticut: State Senate and State House of Representatives (2000 and 2010) – redistricting consultation

Florida: State Senate (2000) – redistricting consultation

Kansas: State Legislative Research Department (2000, 2010, 2020) – redistricting consultation

Louisiana: Louisiana Legislative Black Caucus (2000) – expert witness testimony

Massachusetts: State Senate (2000 and 2010) – redistricting consultation

Maryland: Attorney General (2000) – redistricting consultation

Michigan: Redistricting Commission (2020) – redistricting consultation

Miami-Dade County, Florida: County Attorney (2000 and 2010) – redistricting consultation

Nassau County, New York: Redistricting Commission (2000) – redistricting consultation

New Mexico: State House (2000) – redistricting consultation, expert witness testimony

New York: State Assembly (2000), State Senate (2020) – redistricting consultation

New York City: Redistricting Commission and Charter Commission (2001, 2011) – redistricting consultation and Section 5 submission assistance

New York State Court: Expert to the Special Master (drew congressional lines for state court)

Rhode Island: State Senate and State House (2000 and 2020) – redistricting consultation

Vermont: Secretary of State (2000) – redistricting consultation

International Clients since 2000

United Nations

- Afghanistan – electoral system design and district delimitation expert
- Bangladesh (UNDP) – redistricting expert
- Sierra Leone (UNDP) – redistricting expert
- Liberia (UNMIL, UN peacekeeping mission) – redistricting expert
- Democratic Republic of the Congo (MONUC, UN peacekeeping mission) – election feasibility mission, electoral system design and redistricting expert
- Kenya (UN) – electoral system design and redistricting expert
- Haiti (UN) – election feasibility mission, electoral system design and redistricting expert
- Zimbabwe (UNDP) – redistricting expert
- Lead Writer on the topic of boundary delimitation (redistricting) for ACE (Joint UN, IFES and IDEA project on the Administration and Cost of Elections Project)

International Foundation for Election Systems (IFES)

- Afghanistan – district delimitation expert
- Sudan – redistricting expert
- Kosovo – electoral system design and redistricting expert
- Nigeria – redistricting expert
- Nepal – redistricting expert
- Georgia – electoral system design and district delimitation expert
- Yemen – redistricting expert
- Lebanon – electoral system design and redistricting expert
- Malaysia – electoral system design and redistricting expert
- Myanmar – electoral system design and redistricting expert
- Ukraine – electoral system design and redistricting expert
- Pakistan – consultant for developing redistricting software
- Principal consultant for the Delimitation Equity Project – conducted research, wrote reference manual and developed training curriculum
- Writer on electoral boundary delimitation (redistricting), Elections Standards Project
- Training – developed training curriculum and conducted training workshops on electoral boundary delimitation (redistricting) in Azerbaijan and Jamaica

International Institute for Democracy and Electoral Assistance (International IDEA):

- Consultant on electoral dispute resolution systems
- Technology consultant on use of GIS for electoral district delimitation
- Training – developed training material and conducted training workshop on electoral boundary delimitation (redistricting) for African election officials (Mauritius)
- Curriculum development – boundary delimitation curriculum for the BRIDGE Project

Other international clients have included The Cayman Islands; the Australian Election Commission; the Boundary Commission of British Columbia, Canada; and the Global Justice Project for Iraq.
